**WELL INVESTIGATION PROGRAM—SITE ASSESSMENT ACTIVITIES AT 1200 S.
VICTORY BLVD., BURBANK, CA. (FILE NO. 110.0622)**

Reference is made to your consultant's, The Reynolds Group, Subsurface Soil Gas Investigation Report dated October 1995, transmitting the results of the soil gas investigation conducted at the subject site. We have reviewed the report and find that 5 soil gas samples from 3 sampling locations (SG-1, SG-2 and SG-3) were collected at 5 and 15 feet below ground surface. 1,1,1-trichloroethane (1,1,1-TCA) and perchloroethylene (PCE) were the only constituents detected from the soil gas investigation in all soil gas samples with the maximum concentrations of 12.5 and 1.8 µg/L, respectively, at the five-foot depth interval.

Due to the limited subsurface investigation completed, at this point, it is difficult for us to make a final determination regarding the actual impacts from your company's operations to soils and/or potential ground water resources underlying your facility. However, based upon the site specific information and above-mentioned soil gas data obtained up to date, the PCE and 1,1,1-TCA soil gas concentrations identified underlying the subject site does not warrant any soil remediation and/or appear to pose a water quality problem. Therefore, we have determined that no further subsurface soil investigation work for this site will be required with respect to the Well Investigation Program. However, you are required to notify this Regional Board of any change in your operations at this facility, including the use and handling of chemicals and/or processing and disposal of waste. It should be noted that this letter in no way releases you from any chemical and/or waste handling requirements of this or any other agency.

If you have any questions, please contact Ms. Ana Veloz at (213) 266-7590.

A handwritten signature in dark ink, appearing to read 'Gregg Kwey'.
